

Muhammad Ammar Khan

Software Engineer — Backend & AI/ML

Lahore, Pakistan · ammarkhanccloud@icloud.com · github.com/ammarchere02 · linkedin.com/in/-ammar-khan

Backend-focused software engineer building with Node.js, Python, and FastAPI, with hands-on experience integrating LLM APIs (Claude, Gemini, Ollama) and prompt engineering into deployed, production tools. Delivered end-to-end projects from client scoping to cloud deployment, including leading a small team through a full SDLC — comfortable across relational data modeling, REST API design, and cloud infrastructure.

EXPERIENCE

Backend Development Intern — Southville Solutions

Nov 2024 – Jan 2025

- Built and maintained RESTful APIs using Node.js and FastAPI, supporting core production application features.
- Designed and optimized MySQL database schemas using ORM frameworks, improving data retrieval efficiency.

Freelance Software Engineer — Remote, Part-Time

2025 – 2026

- Architected and delivered end-to-end web solutions for clients, managing full project lifecycle from scoping to deployment.
- Integrated LLM APIs into client applications, enabling AI-powered product features.

PROJECTS

NeuroForce — Workspace Automation (Team Lead)

Python · FastAPI · MySQL · DigitalOcean

- Led agile sprint development across the full SDLC — system design, iterative delivery, testing, and live deployment.
- Used Claude Code, integrated Ollama to power AI-driven workspace automation features.

Trecommendor — ML Recommendation Engine

Python · Machine Learning

- Built an intelligent recommendation engine using ML algorithms; designed the data pipeline, model training, and API layer end-to-end.

Movie Reservation System

Node.js · Express.js · Sequelize · MySQL

- Built a relational backend for movie ticket booking with full CRUD REST endpoints for showtimes, seats, and reservations.

AI-Powered PowerPoint Automation

Python · LLM API · Prompt Engineering

- Built a tool that generates PowerPoint content automatically by engineering prompts and calling an LLM API.

Task Tracker

Node.js · REST API

- Built a task management API with full CRUD functionality for creating, updating, and tracking daily tasks.

KEY STRENGTHS

- Solution architecture & system design
- AI integration & LLM application development
- Team leadership & project ownership
- End-to-end delivery: requirements to deployed software

TECHNICAL SKILLS

Backend: Node.js, FastAPI, REST APIs, Express.js, Sequelize ORM

Languages: Python, JavaScript, C++

AI / Automation: LLM integration (Claude, Gemini, Ollama), prompt engineering, low-code workflow automation

Database: MySQL, ORMs (SQLAlchemy), relational data modeling

Cloud & DevOps: DigitalOcean, Linux, Git, CI/CD, Docker

Tools: Claude Code, Google Stitch, n8n workflow, Github Copilot

EDUCATION

BS, Computer Science (CGPA: 2.44) — University of Central Punjab, Lahore

2022 – 2026

CERTIFICATIONS

- AI Fluency: Framework & Foundations** — Anthropic · Jun 2026
- Claude 101** — Anthropic · Jun 2026
